D2000ASW is a PWM / Class-D amplifier with on-board Switch-Mode Power Supply designed to give very high performance in audio quality and to deal with all aspects of amplifier use and applications including amplifier + power supply combination, multichannel use, active crossover use, etc.

Power output is 2000W into 4 ohms, overcurrent protection is likely to operate with continuous high power levels into 2 ohms.

D2000ASW is a full bandwidth module (20 kHz power bw) and can be used for a broad range of applications from HIFI, Home Cinema to Pro Audio, Active Speakers, Installation...

Sound quality is very good indeed and THD + N is 0.02% or better.

The D2000ASW can power an external D2000A or a D500A module. (for BiAmp operation)

D2000ASW has these connections:

- \* Balanced input header (3-pin moxex)
- \* Expansion header (8-pin moxex) with inout/output + power for external signal processing, crossover, eq,...
- \* Front panel header (7-pin moxex) with volume control in/out + output to led meter and power for this.
- \* Channel-2 link (6-pin moxex) with clock and audio connection to additional channel module.
- \* Mode selector (2x6 pin moxex) selects fullrange, high or low for both main module and ch-2.
- \* Power input (3-pin connector) 115V / 230V AC
